Art Unit: 1743

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20 and 33-53, drawn to an electrochemical cell and method of use having a first planar electrode positioned substantially transverse to the atleast one skin piercing member, classified in class 436, subclass 63.
- II. Claim 54, drawn to a device having first and second porous electrodes, classified in class 436, subclass 150.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a first planar electrode positioned substantially transverse to the atleast one skin piercing member is not claimed. The subcombination has separate utility such as blood collection.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

During a telephone conversation with Ms. LaSalle on 2/18/04 a provisional election was made without traverse to prosecute the invention of group I, claim 1-20 and 33-53. Affirmation of this election must be made by applicant in replying to this Office

action. Claim 54 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. LaSalle on 2/18/04.

Claim 54 has been canceled.

In claim 40 lines 2-3 “, and therein” have been deleted.

In claim 48 line 10 after “second” —device—has been added.

The following is an examiner's statement of reasons for allowance: The cited prior art fails to teach or anticipated a method and apparatus for collecting and testing biological fluids having a first planar electrode positioned substantially transverse to the at least one skin piercing member and a hole axially aligned with the piercing member in the electrode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
